Thanks for looking into this issue Rory. It's always a fight to get the #s to match and frankly, being only two beans off is pretty impressive. Plus, it sounds like you know the inconsistencies and can work with Renae to fix them. I'm not sure what the lag time is between the systems (i.e. if you correct NTTS how long does it take for it to show up in ATTAINS) but that might be a good question to ask Renae as well.

Subject: MT TMDL Count as of July 16, 2013

Hi All,

As of today, ATTAINS is showing 202 TMDLs and 208 Causes for MT. My count is 2 off (206) for the reasons stated below. Do these numbers agree with yours? Let me know.

Flint TPA – My Count (48), ATTAINS' Count(48)

Boulder-Elkhorn Metals TPA – My Count (70), ATTAINS' Count (71)

MT41E002 – Basin Creek, Headwaters To Mouth (Boulder River), NTTS ID #42757. This was one of those ">2012" TMDLs. The pollutant Cadmium is listed **once** in NTTS with a cause of "Unlisted but Impaired", but it is listed **twice** in ATTAINS under the causes "Cadmium" and "Unlisted but Impaired". I think this mix-up was caused by both Renae and I trying to fix it at the same time (I let Renae do all the fixing now) and it ended up in the database twice.

Lower Gallatin TPA – My Count (40), ATTAINS' Count (41)

MT41H003_081 – Bear Creek, Headwaters to Mouth (Rocky Creek), NTTS ID #42774. This one is my error and I've corrected it in NTTS but it isn't showing corrected in ATTAINS. Sediment was added as a pollutant twice with two different causes instead of Sediment once with two causes.

Bonita-Superior TPA – My Count (14), ATTAINS' Count (14)

Judith Mountains TPA – My Count (34), ATTAINS' Count (34)

Vern – Is Renae the one to talk to for corrections to ATTAINS?

Thanks,
Rory
